

IN THE SPECIFICATION

Please amend the indicated portions of the specification as follows:

[0020] A webbing loop (18) is attached to the tubular body portion (2) to permit attachment of the holster to a belt. One end (20) of the webbing loop (18) is affixed to the top edge (10) of the tubular body portion (2). Thus, when the webbing loop (18) is attached to a belt, its flexibility and relatively narrow width, combined with the weight of the holstered tool, ensures that the holster always hangs vertically, even when the operator moves.
